

WHO recommends eating 1-2 portions of fish per week.

However, if you do not meet this requirement, fish oil supplements can help you get enough Omega-3's which help:

Support heart health

- by increasing HDL "good cholesterol" levels
- by lowering triglycerides

Reduce inflammation

- which can help ease symptoms of diseases associated with chronic inflammation

Support early growth and development

- by improving infant visual development
- by reducing risk of allergies

Reduce joint pain intensity

- Like morning stiffness, tenderness and discomfort

Enhance Immunity

Support healthy skin... and more!

Frequently Asked Questions

What is the source of the fish? Anchovy and Sardine.

What ocean do the fish come from? The majority of fish are caught in the South Pacific Ocean off the coast of Peru.

What is molecular distillation? Molecular distillation is a form of deodorization that removes pesticides, toxic industrial compounds, heavy metals and other unwanted elements from fish oil that may occur naturally or result from the environment.

Why lemon flavored? Natrol Omega Fish Oil products now have natural lemon oil in the fish oil to ensure a great lemon taste and to help combat the fishy "burp effect" associated with some fish oil supplements.

Can the products be safely used while pregnant? Yes, research confirms an adequate intake of omega-3 fatty acids promotes healthy pregnancy. Pregnant and nursing women should always consult with a healthcare professional before using dietary supplements.
